## Larsen/Silliman U.S. Backgammon Ranking

Below is a list of the top 500 people during the most recent five years (November 1, 2011 - November 1, 2016). It includes the Connecticut tournament of 2016. Column 1 represents their numerical position based on the rightmost column (Rating). Rating is based on a formula that is explained [here](#).

Explanation of the various columns:

Pts	Points that are partially based on a system created by the USBGF that are called "ranked points". That system is explained <a href="#">here</a> . We deviate from the USBGF in that we award points for top 50% finishes, and like the ABT we only consider the main events (Open, Advanced, Novice). Also, like the ABT we treat average points per entry in an Open Division event to be 1.00, the average in the Advanced Division is 0.50, and the average in the Novice Division is 0.25.  If a round takes the number of top finishers over 50%, that round isn't included. For example, we would allocate points to just the top 24 out of 72 if the next round in the hierarchy had 16 matches which would have made 40 out of 72 if the players who lost that round were included.
E	Number of main events that the player entered. Rebuys are counted as a fractional full entry - from 0.2 to 0.7 depending on the tournament. This is done, because if a player didn't re-enter, they would still have the consolation bracket to play in.
Weight of Year	The most recent 12 month period [chronologically, not calendar] carries a weight equal to the square root of 5. The next 12 month period carries a weight equal to the square root of 4, the next 12 month period carries a weight equal to the square root of 3, etc.
Weighted Points	Grand total of all points for the most recent five years with points in a particular year multiplied by that year's weight.
Weighted Events	Grand total of the number of main events entered in the most recent five years with the number of events entered in a particular year multiplied by that year's weight.
Weighted Average	Weighted Points / Max(Weighted Events,10) Note: If a person's total weighted events is less than 10, 10 is used.
x	A number that grows from 0.000 to 1.000 until weighted events = 50. It's the square root of Weighted Events / 50.
Rating	Weighted Average multiplied by x

Click on a heading to sort the data by it.
